

CE Marking and Dukkaboard OG-Panel

Product Description

Dukkaboard OG-Panel (aka. Dukkaboard Original) is a tile backer board featuring an extruded polystyrene (XPS) core with a cementitious coating. This composite structure distinguishes it from traditional cement-particle boards, which are homogeneous and typically fall under harmonized European Norms (hENs) such as **EN 12467** or **EN 13986**.

However, **Dukkaboard OG-Panel** does not fall under any current harmonized European Standard (hEN), nor has it been assessed under a European Technical Assessment (ETA). As a result, CE marking is not mandatory for this product under the **EU Construction Products Regulation (CPR) No 305/2011**.

This technicality arises because the product's hybrid composition (XPS core with cement coating) does not align with the scope of existing hENs, which are typically designed for uniform material types. Therefore, CE certification is not applicable unless the manufacturer voluntarily seeks an ETA, which is not currently the case for Dukkaboard OG-Panel.

For further assurance, customers are encouraged to request the **Product Warranty** and **BBA Certificate** from their supplier
